**WELCOME**

Internet is increasingly becoming an important medium for dissemination of information and conducting business. Enabling transactions through Internet thus becomes essential as a means to provide better flexibility and convenience to clients and further increasing efficiency of settlement of trades in the capital market. Safety of transactions is however, a very crucial issue in Internet based solutions. This assumes significance in case of depository transactions since it involves movement of high-value financial assets across accounts. Further, depository transactions are also time critical. The lapse or failure to deliver the securities in time for pay-in to the stock exchanges may lead to financial loss.
